Amendments to the Specification

Please correct page 8, second paragraph, line 13.

To prepare the electrolyte solution containing both calcium phosphate and chitosan, the calcium phosphate containing component and the chitosan containing component are mixed together. Preferably, the resulting concentration of calcium phosphate is from ~~about~~ about 0.1M to about 1M and the resulting concentration of chitosan (by weight) in the electrolyte solution is from about 0.02% to about 5% (about 1.2×10^{-3} M to about 0.3M), more preferably from about 0.1% to about 1%. As mentioned above, the resulting pH of the electrolyte solution is from about 1.5 to about 7, preferably from about 1.5 to about 5, and most preferably from about 2 to about 4.
